LXE Expands Connectivity Offerings with Wavelink® Solutions

LXE to Offer Factory-licensed Wavelink Terminal Emulation and Industrial Browser Software across its Windows Mobile® and Windows® CE-based Family of Mobile Computers

ATLANTA, November 11, 2009 – LXE Inc., the rugged mobile computer business of EMS Technologies, Inc., announced today that it has expanded its relationship with Wavelink to now include pre-loading and pre-licensing Wavelink Terminal Emulation and Wavelink Industrial Browser software, in addition to existing Wavelink® Avalanche Mobility Center™ enablers, on all of its Windows Mobile® and Windows CE-based mobile computers. LXE can now deliver Wavelink licensed software, enabled for its mobile computers, directly from its Norcross manufacturing facility.

With Wavelink software pre-installed on LXE computers, customers have readily available access to industry-leading software that manages their devices and connects them to host systems. Wavelink Terminal Emulation certification on LXE Windows Mobile and Windows CE-based mobile computers also enables the use of Wavelink Speakeasy plug-ins for rapid deployment of LXE devices in voice logistics applications. Product licenses for Wavelink software can be enabled either through existing Wavelink channels or, as a result of the expanded relationship, through purchase directly from LXE. LXE is including the first year of Wavelink maintenance free with the purchase of Wavelink Terminal Emulation or Industrial Browser licenses from LXE.

“LXE is committed to delivering innovative and reliable products to the marketplace. Many of our partners have standardized with Wavelink software as part of their solution implementations. Working with Wavelink ensures that our partners and customers have the ability to take advantage of many of the features and functionality that Wavelink is known for,” said Steve Newell, LXE’s general manager. “Including Wavelink software further supports our commitment to providing products that help customers gain efficiencies through data collection.”

“We have enjoyed a great relationship with LXE for many years and are excited to expand our partnership to offer pre-licensed Wavelink software on all LXE Windows CE-based devices,” said Steve Bemis, Wavelink vice president of worldwide sales. “This agreement

further strengthens our position within the industry as Wavelink software ships on more mobile devices than all of our competitors combined.”

LXE Windows Mobile and Windows CE-based mobile computers, with the addition of Wavelink’s Terminal Emulation and Industrial Browser software, are now available for immediate order or purchase.
