EMS Global Tracking Issues Forth From EMS Satcom + Satamatics

EMS Global Tracking, a division of EMS Technologies, Inc., has unveiled its combined suite of tracking and personnel recovery systems at the *Defense Systems and Equipment International Conference (DSEi)* — the division, formerly the Tracking and Messaging, and Search and Rescue (SAR) business units of EMS SATCOM, and the recently acquired Satamatics>, have combined forces to offer a broad range of solutions to both military and civilian markets.

The division's senior management team is distributed between its offices in Tewkesbury, and Ottawa, Ontario. *Koutrouki* will lead a talented international management team that includes *Steven Edgett*, vice president of business development and strategy; *John McQueen*, commercial sales director; *Stephane Momy*, government and security sales director; *Phil Wilkinson*, director of operations, and *Richard Smith*, head of engineering. Edgett previously led the company's SAR business, which is a leader in **Cospas-Sarsat** satellite constellation ground segment systems. The new division offers global tracking and messaging solutions for force-tracking, low-data rate and *machine-to-machine (M2M)* tracking for NGOs, maritime users, search-and-rescue and personnel recovery systems for civilian and military applications. The systems operate over a number of satellite constellations, including **Inmarsat**, **Iridium**, **SkyTerra**, and **Cospas-Sarsat**. EMS Global Tracking systems offer users a variety of options that will meet specific requirements.
